

Check out our latest ROV training simulator!

ROVsim Gen3 is a PC based ROV simulation program intended for ROV pilot training and familiarization. It includes two ROVs, 17 missions and a complete set of user controls, including: sea state, current, visibility, day/night, input, collisions, serial data output, etc.

ROV Personnel Log Book

Working and observation class ROVs often work in pairs, and ROVsim Gen3 was specifically designed to include that training requirement. ROVsim Gen3 is the first PC based simulator to allow two, simultaneous and fully operational ROVs in the same mission. ROVsim Gen3 is the result of over two decades work with the subsea industry and developing ROV training simulators.

Features

- Fully immersive 3D environment
- Realistic graphics effects
- Realistic ocean environment
- Physics accurate ROV and tether simulation
- Observation and working class ROV simulator
- 17 WC and OC ROV missions
- Integrated Scanning Sonar simulator
- Tether Management System (TMS)
- Vehicle pitch / roll control
- Four cameras views plus "quad" screen
- Vehicle dynamics editor
- Current and visibility editor
- Surging currents
- Day / Night simulation
- Casualty simulation
- Custom input device manager
- Auto tether management
- NMEA 0183 data out via serial port
- Windows 10 support
- Complies with requirements for IMCA Class B simulators.
